EasyCAM

SEWER CAMERAS

2024 PRODUCT GUIDE

AN INTRODUCTION TO EasyCAM

My name is Rick Joy, I am the owner of EasyCAM Sewer Inspection Cameras and a retired plumber with over 40 years of experience. I have owned plumbing franchises in both New Jersey and Florida, so I am very familiar with the plumbing service business. Throughout my career we specialized in sewer/drain cleaning and repair, which ultimately got me thinking about designing a sewer inspection camera system that made sense to the plumber who owned it.

I worked my plumbing business up to 13 service vans, two jetters, a reline system, backhoe, and owned a bunch of sewer cameras and locating equipment. Because our focus was on sewer cleaning, repair, and replacement, we used the heck out of our cameras. Those big jobs that we all hope for start with a camera inspection. But along with all the success, my camera repair bills were getting out of hand. Those repair costs came with expensive shipping fees and weeks or even months of downtime waiting for the camera to arrive back.

Most plumbers I have spoken to have had the same issues of downtime and expensive repair costs. My idea was simple, build a workhorse of a camera, but designed so the plumber can service it themselves if needed. We can all agree, plumbers are rough on their equipment. Our "Plug and Play" design makes repairs easy, using simple hand tools, eliminating excessive downtime and costly repairs.

As the next step in our common-sense approach, we proudly introduce the EasyCAM Cable Re-Term Kit, which makes it simple for a plumber to do their own cable repair if needed. There is no other camera manufacturer that can do that! Simply put, EasyCAM, It Just Makes Sense!
